ADD TO BAG

When user selects a product category:

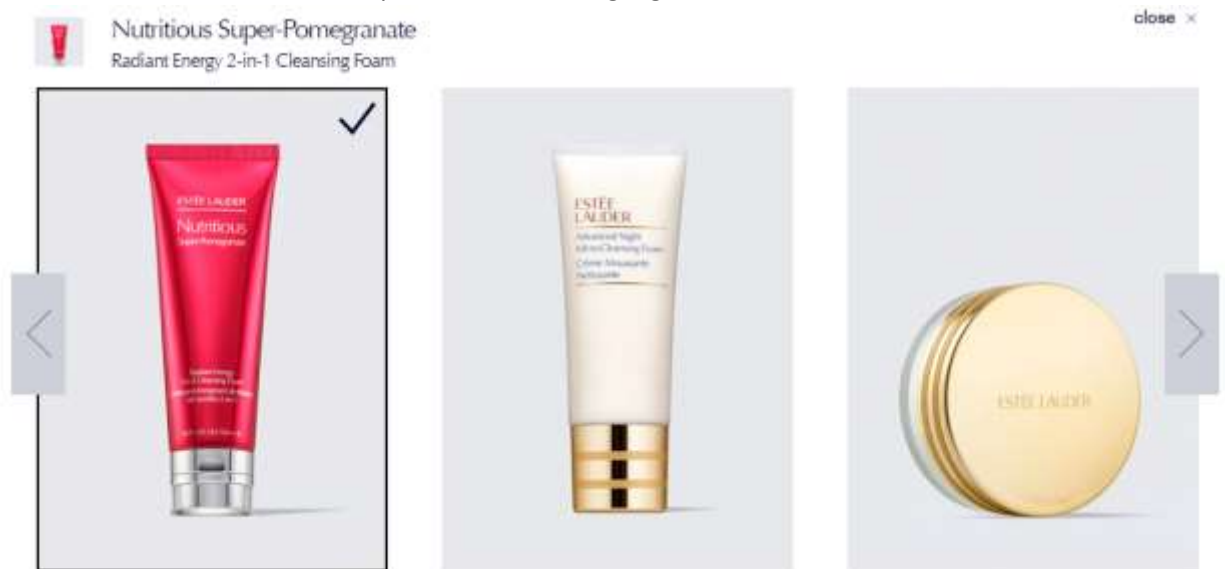

- The selected category SL No must be highlighted as shown highlighted in Black. Other categories SL No should not be highlighted.
- The “select” option should change to “close”
- User can browse across the products available in the selected category by using the carousel component.
- Details of the all products in that particular section should be shown below the product.

**When user selects a product from any category**

- The selected product should get highlighted
- Tick mark should appear on the selected product
- The SL no of the category should change to the selected product image and the name of the product should appear next to it
- If user chooses another product then the previously selected product must be de-selected, and the chosen product must be highlighted

After user selects one product from any category the “select” option from that category should change to “edit” giving an option to the user to select another product from the category.
